Only to be used by certified pest control operators, farmers and persons authorized in government-approved pest control programs.

NOTICE TO USER: This pest control product is to be used only in accordance with the directions on the label. It is an offence under the *Pest Control Products Act* to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

DIRECTIONS FOR USE:

BARTLETT MOUSE BAIT applied at 4.5 - 9 kg/ha for the control and eradication of field mice in Orchards, Christmas Tree Plantations, Newly Reforested Area, etc.

TIME AND APPLICATION: BARTLETT MOUSE BAIT may be applied in early fall, or any time before a covering of snow. Apply Mouse Bait covering the entire tree area, with a cyclone seeder, tractor drawn seeder, seed drill adjusted to sow the bait just below the grass cover, or by hand. When spreading by hand wear clean rubber gloves and wash thoroughly after use. Distribute bait evenly but do not apply to bare ground. Never place bait in heaps or piles and where there is a hazard to wildlife or pets.

BAIT STATION BAITING: Place bait in bait stations, which will prevent animals other than the pests from getting at the bait. Use 15 g of bait per bait station. Bait stations should bear the product name, active ingredient, guarantee, registration number, "WARNING POISON", and the skull and crossbones symbol. Baited areas should be checked 2 to 3 weeks after application and if evidence of live field mice are found, this area should be retreated with Mouse Bait.

USE LIMITATIONS: Bait applied outdoors, above-ground in residential areas, in public areas, or in any other sites that are or will be open to the public (for example, Pick-Your-Own sites), or in locations accessible to pets or livestock, MUST be placed in tier 1 bait stations. Bait stations (tier 1) used outdoors, above-ground in locations accessible to children, pets or livestock must have the following characteristics:

- 1) be resistant to destruction or weakening by elements of typical non-catastrophic weather (such as, some, rain, extremes of temperature and humidity, direct sunshine, etc.)
- 2) be constructed of high-strength material (e.g., metal or injection moulded plastic) and resistant to destruction by children and non-target animals
- 3) have an entrance designed so that children and non-target animals cannot reach the bait
- 4) have an internal structure that prevents bait from being shaken loose
- 5) have an access panel that fastens securely and locks (e.g., metal screw or padlock)
- 6) bear the product name, active ingredient, guarantee, registration number, "WARNING POISON", and the skull and crossbones symbol.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN, PETS AND LIVESTOCK. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Wash skin thoroughly with soap and water after handling. Wash contaminated clothing, separately from other laundry, with soap and hot water before reuse. Users should remove clothing immediately if pesticide gets inside. Then wash skin thoroughly and put on clean clothing. Chemical-resistant gloves must be worn when disposing of dead rodents, unconsumed bait and empty containers. All handlers, including loaders and applicators, must wear a long-sleeved shirt, long

pants, shoes plus socks and chemical-resistant gloves. In addition, persons loading pellets or bait into mechanical ground equipment or loading/applying with handpushed or handheld equipment, must wear a NIOSH-approved particulate-filter respirator and protective eyewear.

FIRST AID: IF SWALLOWED: Call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person. For all cases of human ingestion, immediately notify a poison control centre or doctor. IF IN THE EYES: Hold eye open and rinse slowly and gently with water for 15 – 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call the poison control centre or doctor for treatment advice. IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control centre or doctor for further treatment advice. IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 – 20 minutes. Call a poison control centre or doctor for treatment advice. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention. If pet or livestock poisoning suspected, immediately contact a veterinarian.

STORAGE: Store in a cool, dry place away from other chemicals and food or feed. Store product not in use in original container in a secure location inaccessible to children and non-target animals.

TOXICOLOGICAL INFORMATION: Treat Symptomatically. Any person applying zinc phosphide and experiencing signs and symptoms such as nausea, abdominal pain, tightness in the chest, or weakness should be seen by a doctor immediately. Avoid use of all oils. There is no specific antidote. If swallowed, very thorough gastric lavage usually indicated.

DISPOSAL: Do not reuse empty container. Dispose of unused or spoiled bait in accordance with local requirements. Follow provincial instructions for any required cleaning of the container prior to its disposal. Make the empty container unsuitable for further use. Dispose of the container in accordance with provincial requirements. For more information on the disposal of unused, unwanted product contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

RODENT DISPOSAL: Dispose of dead rodents in garbage or by burying.
