

ZincMax™ | Max™ Line

The ultimate zinc foliar fertilizer.

ZincMax is formulated without nitrates, sulfates, or chlorides to safely deliver zinc to the crop in the right form at the right time. Zinc is an essential nutrient for crops that can be difficult to access when soils are cool, and in alkaline soils. Zinc is vital for the activity of a wide variety of enzymes that contribute to hormone production, growth, and defence against environmental stress. Foliar applications of ZincMax safely and efficiently deliver zinc which rapidly penetrates the cuticle and is quickly metabolized within the canopy to help crops reach their maximum yield potential.

Benefits:

- A completely soluble zinc source ensuring efficient uptake and metabolism for maximum nutritional benefits.
- Foliar fertilizers supply nutrients at the right time and avoid uptake issues associated with soil temperature, pH, and nutrient interactions.
- Contains no nitrates, sulphates, or chlorides for maximum crop safety.
- Tank-mix compatible with most crop protection chemicals.

Analysis:

Zinc (Zn)	10.2%
Boron (B)	0.5%

Application rate:

1.0-2.0 L/ac (2.5-5.0 L/Ha)

Zinc Deficiency:

Zinc deficiency appears first in the new leaves as interveinal chlorosis giving the crop a banded appearance. In fruit trees and potato, zinc deficiency leads to rosetting and die back.
